Uniform Mitigation Verification Inspection Form

Maintain a copy of this form and any documentation provided with the insurance policy

Inspection Date: 08/17/2022							
Owner Information							
Owner Name: Azalea Woods Condo Association			Contact Person:				
Address: 2460 Northside Drive Bldg 15			Home Phone:				
City: Clearwater Florida	Zip: 33761		Work Phone:				
County: Pinellas			Cell Phone:				
Insurance Company:			Policy #:				
Year of Home: 1984	# of Stories: 1		Email:				
NOTE: Any documentation used in validating the compliance or existence of each construction or mitigation attribute must accompany this form. At least one photograph must accompany this form to validate each attribute marked in questions 3 though 7. The insurer may ask additional questions regarding the mitigated feature(s) verified on this form.							
1. Building Code: Was the structure builthe HVHZ (Miami-Dade or Broward color A. Built in compliance with the FB a date after 3/1/2002: Building Perror B. For the HVHZ Only: Built in color builting and the structure of the stru	ounties), South Florida C: Year Built mit Application Date (\(\) mpliance with the SFE	Building Code (SFBC-9 For homes built in 2 AMADD/YYYY)// BC-94: Year Built	4)? 2002/2003 provide a pern For homes built in 199	nit application with 94, 1995, and 1996			
provide a permit application with a		•	on Date (MM/DD/YYYY)/_				
 C. Unknown or does not meet the requirements of Answer "A" or "B" 2. Roof Covering: Select all roof covering types in use. Provide the permit application date OR FBC/MDC Product Approval number OR Year of Original Installation/Replacement OR indicate that no information was available to verify compliance for each roof covering identified. 							
Perm 2.1 Roof Covering Type:	it Application Date	FBC or MDC Product Approval #	Year of Original Installation or Replacement	No Information Provided for Compliance			
1. Asphalt/Fiberglass Shingle	12, 2020	BCP2020-0600145	2020				
2. Concrete/Clay Tile							
				Ħ

	/			H			
A. All roof coverings listed above meet the FBC with a FBC or Miami-Dade Product Approval listing current at time of installation OR have a roofing permit application date on or after 3/1/02 OR the roof is original and built in 2004 or later. B. All roof coverings have a Miami-Dade Product Approval listing current at time of installation OR (for the HVHZ only) a roofing permit application after 9/1/1994 and before 3/1/2002 OR the roof is original and built in 1997 or later. C. One or more roof coverings do not meet the requirements of Answer "A" or "B".							
D. No roof coverings meet the requirements of Answer "A" or "B".							
3. Roof Deck Attachment: What is the weakest form of roof deck attachment? A. Plywood/Oriented strand board (OSB) roof sheathing attached to the roof truss/rafter (spaced a maximum of 24" inches o.c.) by staples or 6d nails spaced at 6" along the edge and 12" in the fieldOR- Batten decking supporting wood shakes or wood shinglesOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift less than that required for Options B or C below. B. Plywood/OSB roof sheathing with a minimum thickness of 7/16"inch attached to the roof truss/rafter (spaced a maximum of 24"inches o.c.) by 8d common nails spaced a maximum of 12" inches in the fieldOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent or greater resistance than 8d nails spaced a maximum of 12 inches in the field or has a mean uplift resistance of at least 103 psf. C. Plywood/OSB roof sheathing with a minimum thickness of 7/16"inch attached to the roof truss/rafter (spaced a maximum of 24"inches o.c.) by 8d common nails spaced a maximum of 6" inches in the fieldOR- Dimensional lumber/Tongue & Groove decking with a minimum of 2 nails per board (or 1 nail per board if each board is equal to or less than 6 inches in width)OR-

*This verification form is valid for up to five (5) years provided no material changes have been made to the structure or inaccuracies found on the form.

or greater 182 psf.	resistance than 8d common nails spaced a maximum of 6 inches in the field or has a mean uplift resistance of at leas
	orced Concrete Roof Deck.
E. Other:	
F. Unkno	own or unidentified.
G. No att	ic access.
	Attachment: What is the <u>WEAKEST</u> roof to wall connection? (Do not include attachment of hip/valley jacks within uside or outside corner of the roof in determination of WEAKEST type)
A. Toe N	ails
[Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or
	Metal connectors that do not meet the minimal conditions or requirements of B, C, or D
Minimal cond	litions to qualify for categories B, C, or D. All visible metal connectors are:
	Secured to truss/rafter with a minimum of three (3) nails, and
[Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.
B. Clips	<u> </u>
_	Metal connectors that do not wrap over the top of the truss/rafter, or
	Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nai position requirements of C or D, but is secured with a minimum of 3 nails.
C. Single	
	Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.
D. Doub	
	Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or
	Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.
E. Struct F. Other:	, and the second se
G. Unkno	own or unidentified
H. No att	ic access
	ry: What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of ure over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification).
🗸 A. Hip R	
	Total length of non-hip features: 0 feet; Total roof system perimeter: 350 feet
B. Flat R	Roof on a building with 5 or more units where at least 90% of the main roof area has a roof slope of less than 2:12. Roof area with slope less than 2:12 sq ft; Total roof area sq ft
C. Other	Roof Any roof that does not qualify as either (A) or (B) above.
A. SWR sheath dwelli	(also called Sealed Roof Deck) Self-adhering polymer modified-bitumen roofing underlayment applied directly to the ing or foam adhesive SWR barrier (not foamed-on insulation) applied as a supplemental means to protect the ng from water intrusion in the event of roof covering loss.
B. No SV	VR. Down or undetermined.

*This verificatio	n form is valid for up to five (5) years provided no material changes have been made to the structure or

Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent

^{*}This verification form is valid for up to five (5) years provided no material changes have been made to the structure or inaccuracies found on the form.

7. Opening Protection: What is the weakest form of wind borne debris protection installed on the structure? First, use the table to determine the weakest form of protection for each category of opening. Second, (a) check one answer below (A, B, C, N, or X) based upon the lowest protection level for ALL Glazed openings and (b) check the protection level for all Non-Glazed openings (.1, .2, or .3) as applicable.

Opening Protection Level Chart		Glazed Openings				Non-Glazed Openings	
openir form o	an "X" in each row to identify all forms of protection in use for each ing type. Check only one answer below (A thru X), based on the weakest of protection (lowest row) for any of the Glazed openings and indicate eakest form of protection (lowest row) for Non-Glazed openings.	Windows or Entry Doors	Garage Doors	Skylights	Glass Block	Entry Doors	Garage Doors
N/A	Not Applicable- there are no openings of this type on the structure		Х	Х	Χ		Х
